#### **Corporate Profile**

Aegis Therapeutics is a specialty pharmaceutical company formed to commercialise advanced patented drug delivery technologies that enable the non-invasive delivery of a broad range of protein, peptide and non-peptide macromolecular therapeutics.

---

#### **Drug Delivery Technologies**

Aegis' Intravail™ absorption enhancement agents are mild and non-irritating to mucosal membranes providing exceptionally high and unmatched bioavailability performance, comparable in efficiency with subcutaneous injection, via the intranasal administration route, delivering potent peptide, protein, and large molecule drugs that can currently only be delivered by injection. Additional Intravail™ competitive advantages include:

- non-invasive delivery of a therapeutic without altering its chemical form or biological integrity;
- rapid drug absorption and onset of action;
- avoidance of gastric hydrolysis in the stomach and 'first pass effect' elimination by the liver;
- greater patient convenience and compliance;
- elimination of needlestick injuries and transmission of bloodborne pathogens;
- compatibility with current nasal delivery devices;
- homogeneous formulation and dispensing manufacturing processes for ease of scale-up and production.
