Technology Specialisations

Established in 1999, MedPharm is a drug delivery and contract service company committed to the creation and development of novel systems, particularly for topical (skin, nail, mucous membranes) and airway drug formulations. With over fifty customers worldwide, MedPharm's capabilities span the entire pharmaceutical development process, from simple feasibility studies to the preparation of GMP clinical supplies for Phase I/II trials and technology transfers to manufacturing sites.

In parallel, MedPharm is building its own pipeline by re-formulating old drugs for indications such as eczema, acne, insomnia and onychomycosis, where it believes its innovative delivery systems (e.g. MedSpray™, MedNail®) will have a significant competitive advantage.

MedPharm is also seeking to license out that IP, for example, in novel formulations to enhance pulmonary drug delivery (e.g. MedCrys™, MedEole® and MedAir®), for which it is planning no further internal development.

Corporate Relationships Sought

Contract development, Phase I and II clinical trial supplies
Development and commercialisation partnership using MedPharm's proprietary delivery technologies,
Licensing-in
